

PCC Alumni Portal

Presentation Script (Basic English) · Aligned with Evaluation Rubric · Total time: about 10–12 minutes

Tip for time management: Opening 1 min · Demo 6–7 min · Technical explanation 2–3 min · Closing 1 min · Q&A as allowed by your instructor.

Opening (Professionalism & Time Management — 10%)

Good morning / good afternoon, everyone. My name is [Your Name]. Today I will present our capstone project called the **PCC Alumni Portal**.

This system is for **Pagadian Capitol College**. It helps alumni stay connected, share career information, and read school announcements. It also gives administrators tools to manage alumni records and view reports.

I will show how the system works, explain the main modules, and share how we built it using modern web technology.

1. System Functionality — Implemented Features (25%)

[DEMO: Open browser → <http://localhost:5173>]

Our system has two main user roles: **Alumni** and **Admin**.

Alumni features:

- **Login and Register** — Users can sign in or create an account (demo mode for presentation).
- **Dashboard** — Home page with welcome message, alumni spotlight, quick links, and recent announcements.
- **My Profile** — Personal information, social media links, employment status, and a creative profile layout.
- **Edit Profile** — Opens in a popup modal so users can update their details without leaving the page.
- **Career Tracking** — Users can add employment details and see a timeline of their work history, including company, position, location, date, and salary range.
- **Alumni Directory** — Search and filter alumni by name, course, graduation year, and employment status.
- **Announcements** — Read news and events from the college.

Admin features:

- **Admin Dashboard** — Summary cards and charts for employment and graduates.
- **Manage Alumni** — Table with search, filters, and pagination.
- **Manage Announcements** — Create, edit, and delete announcements.
- **Reports** — Charts and export buttons for reporting.
- **User Management** — List of system users and their roles.

For this presentation, the frontend is fully working. We use sample data in a file called `data.ts`. Connecting to a real database is planned as future work.

[DEMO: Login as Alumni → click through Dashboard, Directory, Profile, Career, Announcements]

2. User Interface Design & Navigation (20%)

We designed the alumni side to feel like a **networking portal**, not a plain office dashboard.

We use the school color palette: navy blue, light blue, cream, plus orange and yellow for highlights. Fonts include Cormorant Garamond for headings and Outfit for body text.

Navigation for alumni: Top menu with Home, Directory, Career, News, and Profile. On mobile, there is a bottom menu for easy thumb access. The profile menu (SU avatar) gives access to logout and switch to admin.

Navigation for admin: Classic sidebar with clear labels — Dashboard, Manage Alumni, Announcements, Reports, and User Management.

The profile page uses a custom layout based on our design sketch: social “Follow Me” buttons, portrait area, name, current job, and personal sayings. Forms use rounded cards, clear labels, and focus states so users know where they are typing.

[DEMO: Show profile page and edit modal; resize window or show mobile bottom nav if possible]

3. Technical Knowledge & Code Explanation (20%)

Technologies we used:

- **React** — Builds the user interface with reusable components.
- **Vite** — Fast development server and build tool.
- **React Router** — Handles page URLs like /alumni/dashboard and /admin/alumni.
- **Tailwind CSS** — Styles the pages with utility classes.
- **Motion** — Smooth animations on login and profile sections.
- **Recharts** — Charts on the admin dashboard and reports.

Important files:

- `src/app/routes.tsx` — Defines all routes for alumni and admin.
- `src/app/layouts/MainLayout.tsx` — Shared layout; different design for alumni vs admin.
- `src/app/data.ts` — Sample alumni, announcements, and employment data.
- `src/app/pages/` — One file per screen (e.g. `AlumniDashboard.tsx`, `CareerTracking.tsx`).

Events and functions (examples):

- Login form `onSubmit` — Shows loading, then navigates to the correct dashboard based on role.
- Directory page — `filter()` runs when the user types in search or changes dropdown filters.
- Edit Profile modal — `useState` controls open/close; portal renders the modal on top of the whole page.
- Manage Announcements — `useState` stores the list; add/edit/delete update the list in memory.

Validation: HTML5 validation on login and register (required email, password fields). More server-side validation will be added when we connect a backend.

Database: Not connected yet. Data is mock data for demo. Next step is MySQL or similar with a REST API.

4. System Flow & Module Explanation (15%)

Flow 1 — Alumni user journey

1. User opens the login page.
2. User selects Alumni and signs in.
3. System opens the alumni dashboard.
4. User updates profile or career, browses directory, reads announcements.
5. User logs out from the profile menu.

Flow 2 — Admin user journey

1. Admin logs in with Admin role (or switches from alumni menu).
2. Admin sees statistics on the dashboard.
3. Admin manages alumni list, posts announcements, views reports.

Module purposes:

Module	Purpose
Authentication	Entry point; separates alumni and admin paths
Alumni Dashboard	Central hub; encourages networking actions
Profile	Identity and contact information for networking
Career	Track employment for tracer study and peer visibility
Directory	Find and connect with other graduates
Announcements	Official communication from the college
Admin Panel	Monitoring and management for staff

[DEMO: Switch to Admin → show dashboard chart → one announcement create → logout]

5. Presentation Skills & Communication (10%)

This section is for you during delivery — not read word-for-word.

- Speak slowly and look at the audience, not only the screen.
- When a panelist asks a question, pause, repeat the question briefly, then answer.
- If you do not know an answer, say: "That feature is planned for the backend phase," or "I will verify that in our documentation."

Sample Q&A answers (basic English)

- **Is login secure?** — Right now it is a demo. Real security needs a backend, hashed passwords, and sessions.
- **Where is data saved?** — Sample data in `data.ts`; admin announcement edits stay in browser memory until refresh.
- **Can alumni see each other's salary?** — Career page stores salary range; privacy controls can be added when we connect the database.
- **Why React?** — Popular, component-based, good for interactive UIs and future mobile/web expansion.

6. Professionalism & Time Management — Closing (10%)

To summarize: we built a working frontend for the PCC Alumni Portal with alumni networking features and an admin management panel. The design follows school colors and is easy to navigate on desktop and mobile.

Completed: UI, routing, search and filters, charts, modals, role switching, demo data.

Next steps: Database, API, real login, save profile and career data permanently, file upload for photos, email for password reset, and deployment online.

Thank you for listening. I am ready for your questions.

Quick Demo Checklist (print this page)

Step	Action	✓
1	Login → Alumni → Sign In	
2	Dashboard → spotlight & announcements	
3	Directory → search / filter	
4	Profile → Edit modal	
5	Career → Add role form + timeline	
6	Announcements	
7	SU menu → Switch to Admin	
8	Admin dashboard + Manage Announcements	
9	Logout
